**Artificial Landscape Grass by TigerTurf**

# Vision Turf 22 (22mm green-green)

## Yarn Characteristics

Yarn 1	Monofilament	Yarn 2	Monofilament
Material	Polyethylene	Material	Polyethylene
Type	Straight	Type	Texturized
Filaments	8	Filaments	5

## Product Specification

Pile Height (mm)	22	Width (m)	2 & 4
Total Height (mm)	24	Total weight (g/m2)	1705

great for kids

great for pets

great for balconies and patios

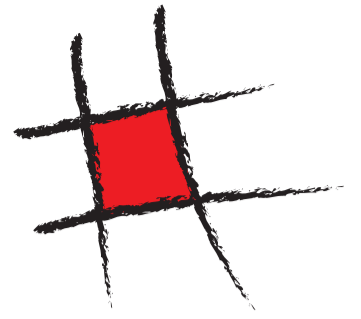

great near pools

# Comfort Turf 30 (30mm green-brown)

## Yarn Characteristics

Yarn 1	Monofilament	Yarn 2	Monofilament
Material	Polyethylene	Material	Polyethylene
Type	Straight	Type	Texturized
Dtex	8000	Dtex	5250
Filaments	8	Filaments	8

## Product Specification

Total Dtex	13,250	Total Filaments (m <sup>2</sup> )	386,400
Pile Weight (g/m <sup>2</sup> )	1056	Stitch Rate / metre	115
Pile Height (mm)	30	Stitches (m <sup>2</sup> )	12075
Total Height (mm)	32	Tufts (m <sup>2</sup> )	24150
Machine Gauge	3/8	Total Weight (g/m <sup>2</sup> )	1899

## Backing Characteristics

Backing Cloth	Polypropylene woven fabrics which are sown together
Coating	Performance formula compound

great for kids

great for pets

great for balconies and patios

great near pools

# Frequently Asked Questions

- Are TigerTurf artificial turf surfaces suitable for pets and children?

Yes, we have creatively engineered our grass from the highest quality yarns with pets and children in mind, ensuring that there are no toxic properties such as lead in any of the components. Any dog mess can be scooped up and brushed and hosed away easily, leaving no permanent effects on the grass.v

- Does TigerTurf require any maintenance?

Once TigerTurf has been installed it only requires minimum maintenance, including a light brushing from time to time to stop the infill from settling and fibres flattening. You may also want to top up your infill to rejuvenate the overall look every now and again, but this is not compulsory.

- Can weeds penetrate the grass?

No, the TigerTurf fibres are tufted into a very strong backing cloth; you also have the protection of the geotextile membrane underneath the grass so the roots of the weeds have little chance of growing through it.

- What about the environment?

Artificial turf could actually be considered a more environmentally friendly alternative to natural turf as it requires no water, pesticides or fertilisers; it therefore requires no energy or fuel to maintain it.
